Hiring Team
Sarvam AI
Bengaluru, Karnataka, India

Re: Backend Engineer, API Team

Dear Hiring Team,

I am writing to express my strong interest in the Backend Engineer position on Sarvam's API Team. As a developer currently building production-grade REST APIs at ARMB using Spring Boot and PostgreSQL, and holding the Microsoft Certified Azure Developer Associate (AZ-204) credential, I am well-positioned to contribute to Sarvam's mission of building sovereign AI infrastructure for India.

Your role calls for engineers who can expose and manage ML models — ASR, TTS, LLM, and Vision — over high-performance, cloud-agnostic APIs. My hands-on work aligns directly with this: I have designed and deployed Python-based REST APIs using Express.js and Django, built systems that run on cloud platforms including Azure and GCP, and developed the CHAR.A.I project — a RAG pipeline on GCP with Pinecone and OpenAI that serves real-time LLM responses via API. I am comfortable working across HTTP, WebSockets, and asynchronous communication patterns, and I understand the demands of latency-sensitive, fault-tolerant systems that serve large user bases.

Beyond API development, my background in AI engineering — including LangChain, LangGraph, vector databases, and model optimization — means I can collaborate effectively with Sarvam's ML teams to bridge the gap between model inference and production API delivery. I bring strong fundamentals in Data Structures and Algorithms (550+ problems solved on LeetCode, Top 8% globally) and practical experience shipping full-stack systems under tight deadlines, including a Top 10/2500 finish at Hackwise 2026 (IIM Indore).

Sarvam's focus on making AI genuinely work for India resonates deeply with me. I would be excited to contribute to the API team that puts these models into the hands of millions. I would welcome the opportunity to discuss how my skills can support your engineering goals.

Warm regards,

Dev Narayanan
